

If you're a student, professor, or researcher, you can learn more about weather phenomena by using A2C immediately! We're offering universities a generous discount on the most current version of our unique, advanced solution for atmospheric modeling.

Universities get up to 90% off our innovative solution. It's a must for research work, graduate studies, student projects, and enhancing your curriculum and class materials. Purchase your university edition of A2C today!

With A2C, you can explore project topics like:

- sea breeze and land breeze
- buoyant and dense gas plumes
- mesoscale to urban scale modeling
- urban heat island
- air pollution research
- environmental studies

Our Academic Package is a complete Windows version of A2C and includes:

- mesoscale model
- microscale model
- transport and diffusion model
- pre- and post-processor
- graphics and animation tools
- user-friendly menu system
- comprehensive user manual
- on-screen help menu
- customer support
